**1. Write a 'java' Program to Demonstrate the concept of class Box with Constructors**

```
import java.io.*;

class Box

{

double width; double

height; double depth;

Box()

{

BufferedReader br=new BufferedReader(new

InputStreamReader(System.in)); System.out.println("\nEnter values:");

try{

width=Double.parseDouble(br.readLine());

height=Double.parseDouble(br.readLine());

depth=Double.parseDouble(br.readLine());

}

catch(IOException ioe)

{

}

}

Box(double w,double h,double d)

{

width=w;

height=h; depth=d;

}

double volume()

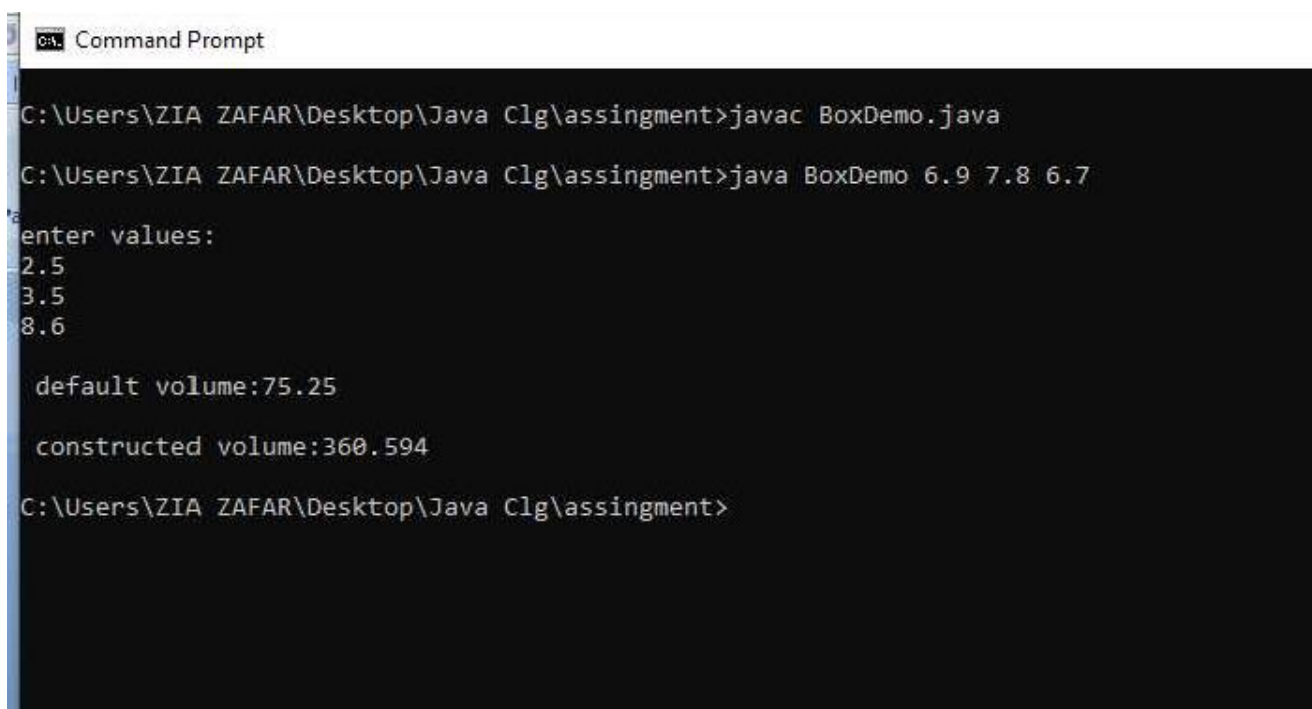

{

return (width*height*depth);

}
```

```
}  
class BoxDemo  
{  
public static void main(String args[])  
{  
Box b=new Box();  
Box b1=new  
Box(Double.parseDouble(args[0]),Double.parseDouble(args[1]),Double.parseDouble(  
args[2])); double vol; vol=b.volume();  
System.out.println("\n default volume:"+vol);  
vol=b1.volume();  
System.out.println("\n constructed volume:"+vol);  
}}}
```

### **Output**

```
Command Prompt  
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>javac BoxDemo.java  
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>java BoxDemo 6.9 7.8 6.7  
enter values:  
2.5  
3.5  
8.6  
  
default volume:75.25  
constructed volume:360.594  
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>
```

**2. Write a java program to calculate salary of n employees using concept of classes with constructor and method?**

```
import java.util.*;

class Employee
{
    private String employeid;
    private String empname;
    private int basicsalary,HRA,DA,GS,incometax,netsalary;
    public void Employee() //Contrcutor
    {
        Scanner sc= new Scanner(System.in);
        System.out.println("Enter the employee id"); //taking all the inputs from the user
        employeid=sc.next();
        System.out.println("Enter the employee name");
        empname=sc.next();
        System.out.println("Enter the basic salary of an employee");
        basicsalary=sc.nextInt();
        calculate();
    }
    public void calculate() //calculating all the parameters
    {
        HRA=(10/100)*basicsalary;
        DA=(73/100)*basicsalary;
        GS=basicsalary+DA+HRA;
        incometax=(30/100)*GS;
        netsalary=GS-incometax;
    }
    public void display() //displaying the calculating parameters
    {
```

```
        System.out.println("Employeeid : "+employeeid);
System.out.println("Employename : "+empname);
System.out.println("Employee basic salary : "+basicsalary);
System.out.println("HRA : "+HRA);
System.out.println("DA : "+DA);
System.out.println("GS : "+GS);
System.out.println("Incometax : "+incometax);
System.out.println("netsalary : "+netsalary);
    }
}
class EmpRecord
{
    public static void main(String args[])
    {
        Employee emp=new Employee();
        emp.Employee();
        emp.display();
    }
}
```

Output:

```

ca. Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac EmpRecord.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java EmpRecord
Enter the employee id
101
Enter the employee name
Ramesh
Enter the basic salary of an employee
150000
Employeeid : 101
Employename : Ramesh
Employee basic salary : 150000
HRA : 0
DA : 0
GS : 150000
Incometax : 0
netsalary : 150000
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>_

```

### 3. write a program to calculate students grade using class methods?

```

import java.util.Scanner;

class StudentGrade

{

int marks[] = new int[6];

int i;

float total=0, avg;

public void student()

{

Scanner scanner = new Scanner(System.in);

for(i=0; i<6; i++)

{

System.out.print("Enter Marks of Subject"+(i+1)+":");

marks[i] = scanner.nextInt();

total = total + marks[i];

}

}

```

```
scanner.close();
}
//Calculating average here
public void stdGrade()
{
    avg = total/6;
    System.out.print("The student Grade is: ");
    if(avg>=80)
    {
        System.out.print("A");
    }
    else if(avg>=60 && avg<80)
    {
        System.out.print("B");
    }
    else if(avg>=40 && avg<60)
    {
        System.out.print("C");
    }
    else
    {
        System.out.print("D");
    }
}
public static void main(String args[])
{
    StudentGrade sg =new StudentGrade();
    sg.student();
    sg.stdGrade();
}}
```

Output:

```
ca. Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac StudentGrade.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java StudentGrade
Enter Marks of Subject1:89
Enter Marks of Subject2:69
Enter Marks of Subject3:85
Enter Marks of Subject4:63
Enter Marks of Subject5:54
Enter Marks of Subject6:78
The student Grade is: B
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**4. write a program to implement single inheritance?**

```
import java.io.*;

class Base

{

void display()

{

System.out.println("\n Sir This is Base class");

}

}

class Derived extends Base

{

void show()

{

System.out.println("\n Sir This is Derived class");

}

public static void main(String args[])

{

Derived d=new Derived();

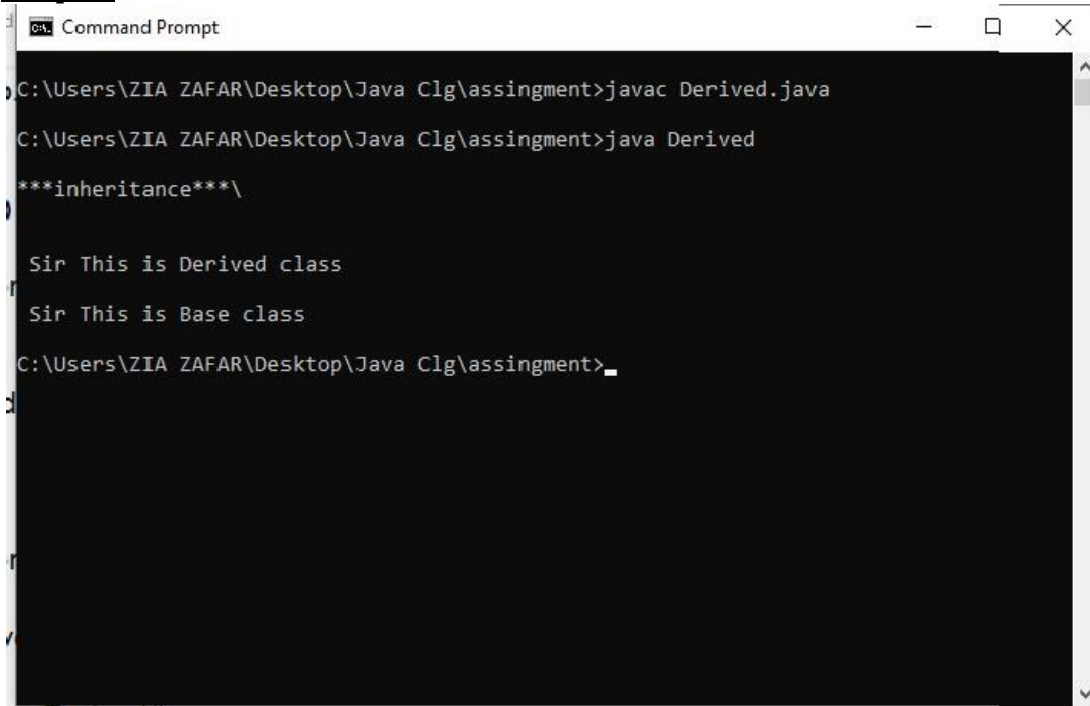

System.out.println("\n***inheritance***\\n");

d.show();

d.display();

}

}
```

**Output:**

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>javac Derived.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>java Derived
***inheritance***\

Sir This is Derived class

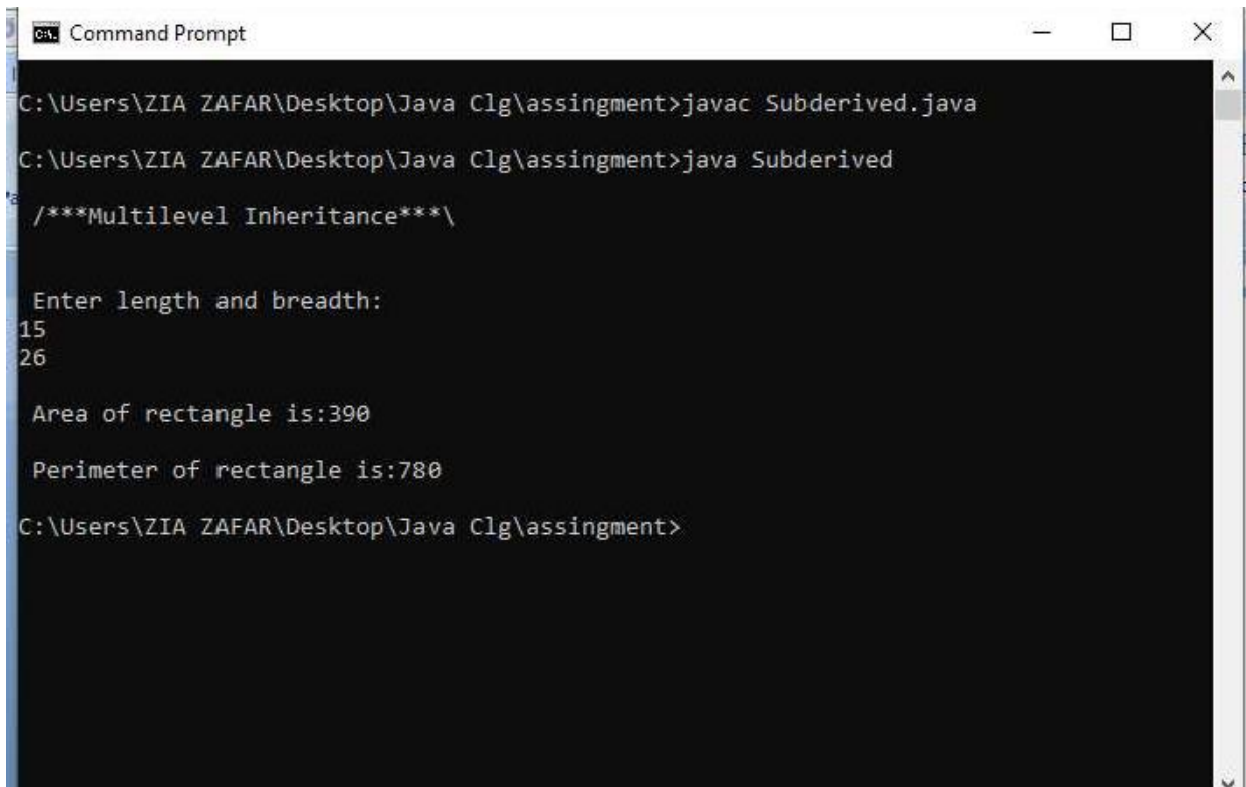

Sir This is Base class
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>_
```

**5. Write a program to implement multilevel inheritance?**

```
import java.io.*;
import java.lang.*;
class Base
{
int l,b;
void area()
{
System.out.println("\n Area of rectangle is:"+(l*b));
}
}
class Derived extends Base
{
void perimeter()
{
area();
System.out.println("\n Perimeter of rectangle is:"+2*(l*b));
}
}
class Subderived extends Derived
{
void Rectangle() throws IOException
{
BufferedReader br=new BufferedReader(new InputStreamReader(System.in));
System.out.println("\n Enter length and breadth:");
l=Integer.parseInt(br.readLine());
b=Integer.parseInt(br.readLine());
perimeter();
}
public static void main(String args[]) throws Exception
{
```

```
System.out.println("\n /**Multilevel Inheritance**/\n");  
Subderived sd=new Subderived();  
sd.Rectangle();  
}  
}
```

### **Output:**

```
Command Prompt  
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>javac Subderived.java  
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>java Subderived  
 /**Multilevel Inheritance**/  
  
Enter length and breadth:  
15  
26  
  
Area of rectangle is:390  
Perimeter of rectangle is:780  
C:\Users\ZIA ZAFAR\Desktop\Java Clg\assingment>
```

**6. Write a program to demonstrate abstract class and dynamic polymorphism?**

```
import java.io.*;

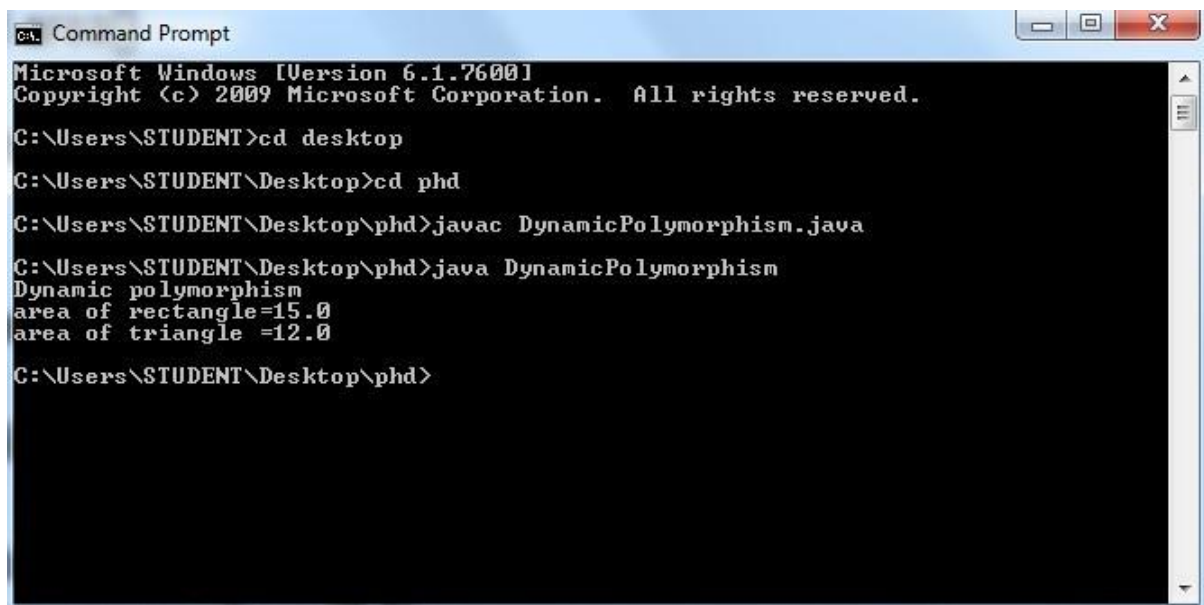

class shape
{
double a,b;
shape(double a,double b)
{
this.a=a;
this.b=b;
}
}

class Rectangle extends shape
{
Rectangle(double a,double b)
{
super(a,b);
}
void area()
{
System.out.println("area of rectangle="+(a*b));
}
}

class Triangle extends shape
{
Triangle(double a,double b)
{
super(a,b);
}
void area()
```

```
{  
System.out.println("area of triangle =" + ((a*b/2)));  
}  
}  
  
class DynamicPolymorphism  
{  
public static void main(String args[])  
{  
System.out.println("Dynamic polymorphism");  
shape s=new shape(2,3);  
Rectangle r=new Rectangle(3,5);  
Triangle t=new Triangle(4,6);  
shape ref;  
ref=r;  
ref.area();  
ref=t;  
ref.area();  
}  
}
```

### Output

```
CA. Command Prompt

```

## 7. Write a program to implement packages?

```
package pack;

import java.util.*;

public class DemoPackage
{
    public void msg()
    {
        System.out.println("Now You Are in package Enter Two number magic...");
        Scanner sc=new Scanner(System.in);

        int n1=sc.nextInt();
        int n2=sc.nextInt();

        int sum=n1+n2;

        System.out.println("Sum Of Two Number is =" +sum );
    }
}

// Access Package

import pack.DemoPackage;

class AccessPackage
{
    public static void main(String args[])
    {
        DemoPackage obj = new DemoPackage();

        obj.msg();
    }
}
```

**Output:**

```
ca. Command Prompt
C:\Users\ZIA ZAFAR\Desktop\New>javac Array1.java
Array1.java:3: error: class, interface, or enum expected
abstract class Ascend implements Comparator
^
1 error

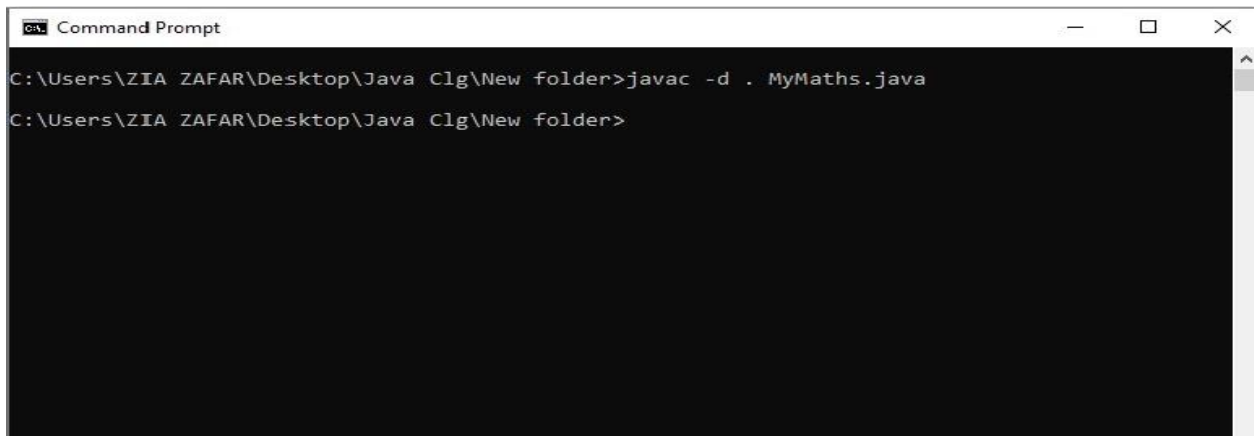

C:\Users\ZIA ZAFAR\Desktop\New>
```

**8. Write a program to demonstrate various arithmetic calculations using packages?**

```
package demopack;

public class MyMaths
{
public int add(int x,int y)
{
return x+y;
}
public int sub(int x,int y)
{
return x-y;
}
public int mul(int x,int y)
{
return x*y;
}
public double div(int x,int y)
{
return (double)x/y;
}
public int mod(int x,int y)
{
return x%y;
}
}
```

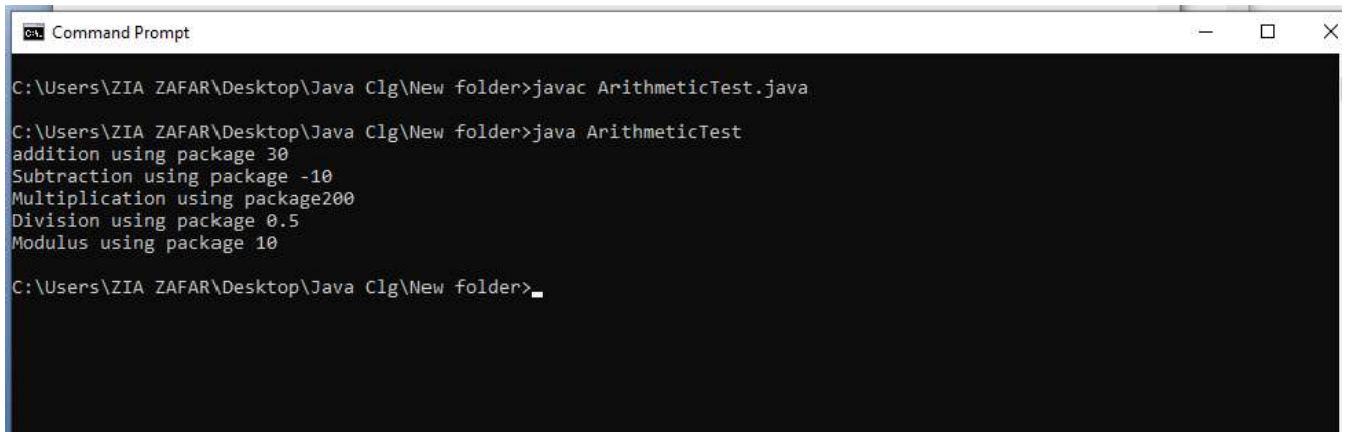

## Package Creations

A screenshot of a Windows Command Prompt window. The title bar reads "Command Prompt". The command prompt shows the current directory as "C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder" and the command "javac -d . MyMaths.java" being executed. The prompt then returns to "C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>".

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac -d . MyMaths.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

```
import demopack.MyMaths;
import java.util.*;
public class ArithmeticTest
{
public static void main(String args[])
{
    MyMaths m = new MyMaths();
    System.out.println("addition using package "+ m.add(10,20));
    System.out.println("Subtraction using package "+ m.sub(10,20));
    System.out.println("Multiplication using package"+ m.mul(10,20));
    System.out.println("Division using package "+ m.div(10,20));
    System.out.println("Modulus using package "+ m.mod(10,20));
}
}
```

## Output:

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac ArithmeticTest.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java ArithmeticTest
addition using package 30
Subtraction using package -10
Multiplication using package 200
Division using package 0.5
Modulus using package 10
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>_
```

## 9. Write a program to implement string handling methods?

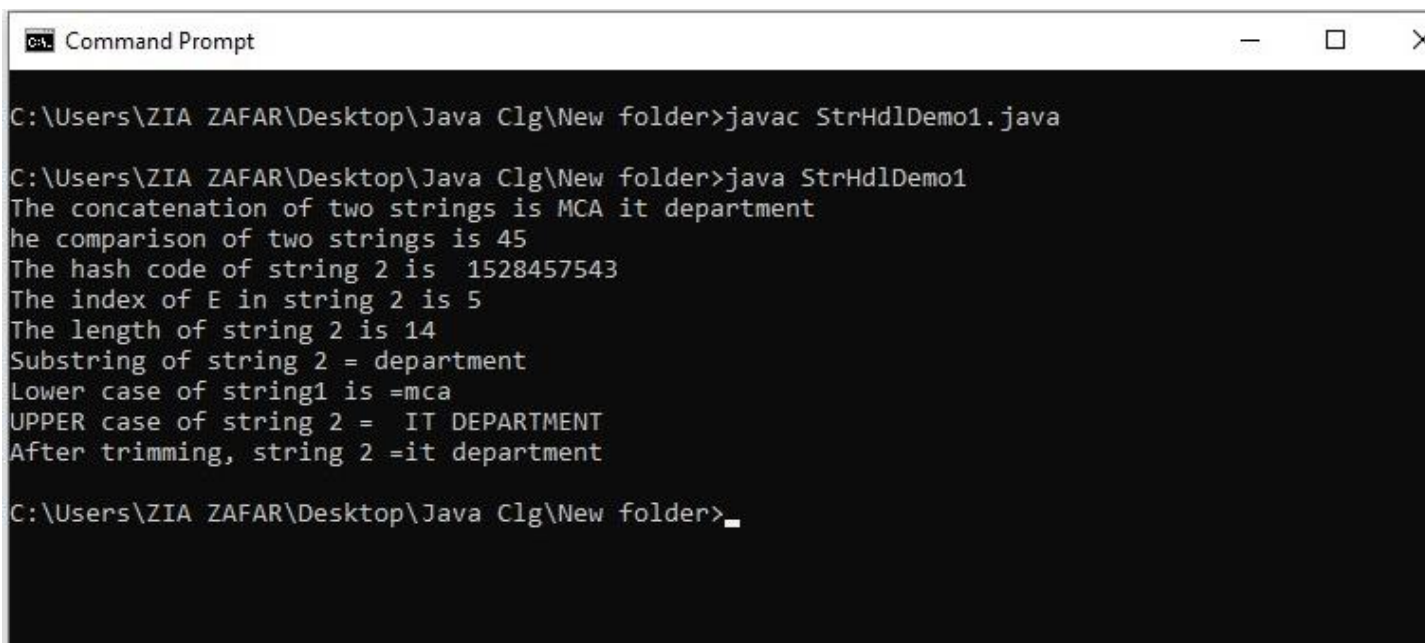

```

class StrHdlDemo1
{
public static void main(String args[])
{
String s1="MCA";
String s2=" it department";
String st=s1.concat(s2);
int cmp=s1.compareTo(s2);
long hs=s2.hashCode();
int s=s2.indexOf('e',3);
int ln=s2.length();
String sb=s2.substring(4);
String lwr=s1.toLowerCase();

String upr=s2.toUpperCase();
String trm=s2.trim();
System.out.println("The concatenation of two strings is "+st);
System.out.println("he comparison of two strings is "+cmp);
System.out.println("The hash code of string 2 is "+ hs);
System.out.println("The index of E in string 2 is "+s);
System.out.println("The length of string 2 is "+ln);
System.out.println("Substring of string 2 = "+sb);
System.out.println("Lower case of string1 is "+lwr);
System.out.println("UPPER case of string 2 = "+upr);
System.out.println("After trimming, string 2 =" +trm);
}
}

```

### Output

```

C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac StrHdlDemo1.java

C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java StrHdlDemo1
The concatenation of two strings is MCA it department

element using Iterator
Japan
China
America
India

C:\Users\ZIA ZAFAR\Desktop\Java C1g\New folder>
```

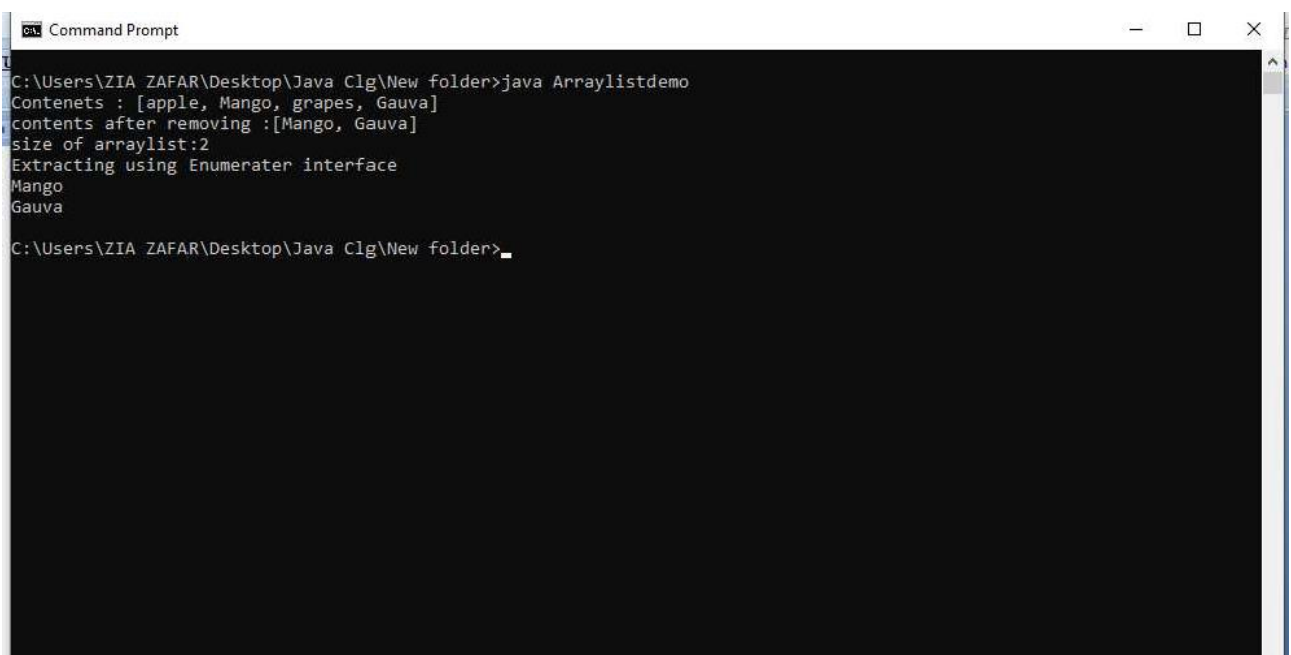

**15. Write a program to demonstrate Iterator class?**

```
import java.util.*;
class Arraylistdemo
{
public static void main(String args[])
{
    ArrayList arl = new ArrayList();
    arl.add("apple");
    arl.add("Mango");
    arl.add("grapes");
    arl.add("Gauva");
    System.out.println("Contenets : "+arl);

    arl.remove("apple");
    arl.remove(1);
    System.out.println("contents after removing :"+arl);
    System.out.println("size of arraylist:"+arl.size());
    System.out.println("Extracting using Enumerater interface");
    //Enumeration e = arl.enumeration();
    //while(e.hasMoreElements())
    Iterator tr=arl.iterator();
    while(tr.hasNext())
    {
    System.out.println(tr.next());
    }

}
}
```

Output:

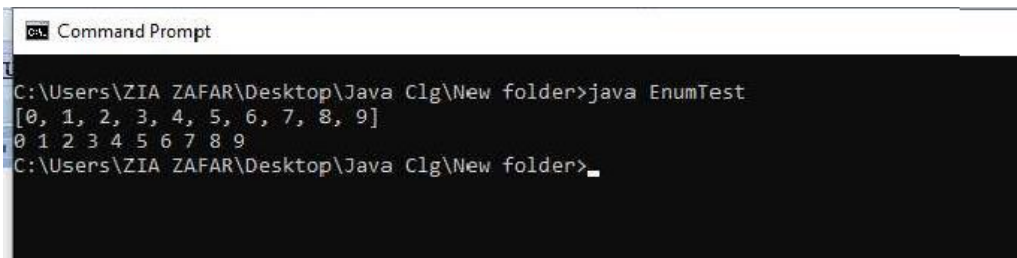

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java Arraylistdemo
Contenets : [apple, Mango, grapes, Gauva]
contents after removing :[Mango, Gauva]
size of arraylist:2
Extracting using Enumerater interface
Mango
Gauva
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**16. Write a program to demonstrate Enumeration interface?**

```
import java.util.Enumeration;
import java.util.Vector;
public class EnumTest
{
    public static void main(String[] args)
    {
        Vector v = new Vector();
        for (int i = 0; i < 10; i++)
            v.addElement(i);
        System.out.println(v);

        Enumeration e = v.elements();
        while (e.hasMoreElements())
        {
            int i = (Integer)e.nextElement();
            System.out.print(i + " ");
        }
    }
}
```

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java EnumTest
[0, 1, 2, 3, 4, 5, 6, 7, 8, 9]
0 1 2 3 4 5 6 7 8 9
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>_
```

**17. Write a program to demonstrate Comparator Interface?**

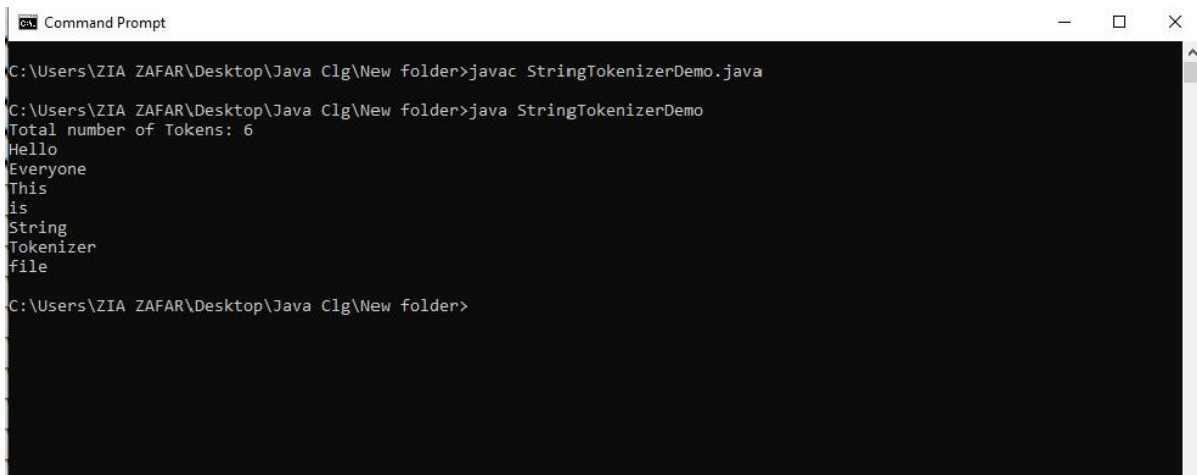

```
import java.io.*;
import java.util.*;
abstract class Ascend implements Comparator
{
    public int compare(Integer i1,Integer i2)
    {    return i1.compareTo(i2); }
}
class Decend implements Comparator
{
    public int compare(Integer i1,Integer i2)
    {    return i2.compareTo(i1); }
}
class Array1
{
    public static void main(String args[]) throws IOException
    {
        BufferedReader br = new BufferedReader(new InputStreamReader(System.in));
        System.out.print("how many elements");
        int size = Integer.parseInt(br.readLine());
        Integer arr[] = new Integer[size];
        for(int i=0;i<size;i++)
        {
            System.out.println("Enter int:");
            arr[i]=Integer.parseInt(br.readLine());
        }
        Arrays.sort(arr,new Ascend());
        System.out.println("\n sorted in Asending order:");
        display(arr);
    }
    static void display(Integer arr[])
    {
        for(Integer i: arr)
            System.out.print(i+"\t");
    }
}
```

## Ouput

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\New>javac Array1.java
Array1.java:3: error: class, interface, or enum expected
abstract class Ascend implements Comparator
^
1 error
C:\Users\ZIA ZAFAR\Desktop\New>
```

**18. Write a program to implement string tokenizer?**

```
import java.util.StringTokenizer;
class StringTokenizerDemo
{
public static void main(String args[])
{
StringTokenizer st = new StringTokenizer("Hello Everyone Have a nice day"," ");
System.out.println("Total number of Tokens: "+st.countTokens());
StringTokenizer sd = new StringTokenizer("Hello Everyone This is String Tokenizer file"," ");
while (sd.hasMoreTokens())
{
System.out.println(sd.nextElement());
}
}
}
```

**OutPut:**

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac StringTokenizerDemo.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java StringTokenizerDemo
Total number of Tokens: 6
Hello
Everyone
This
is
String
Tokenizer
file
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

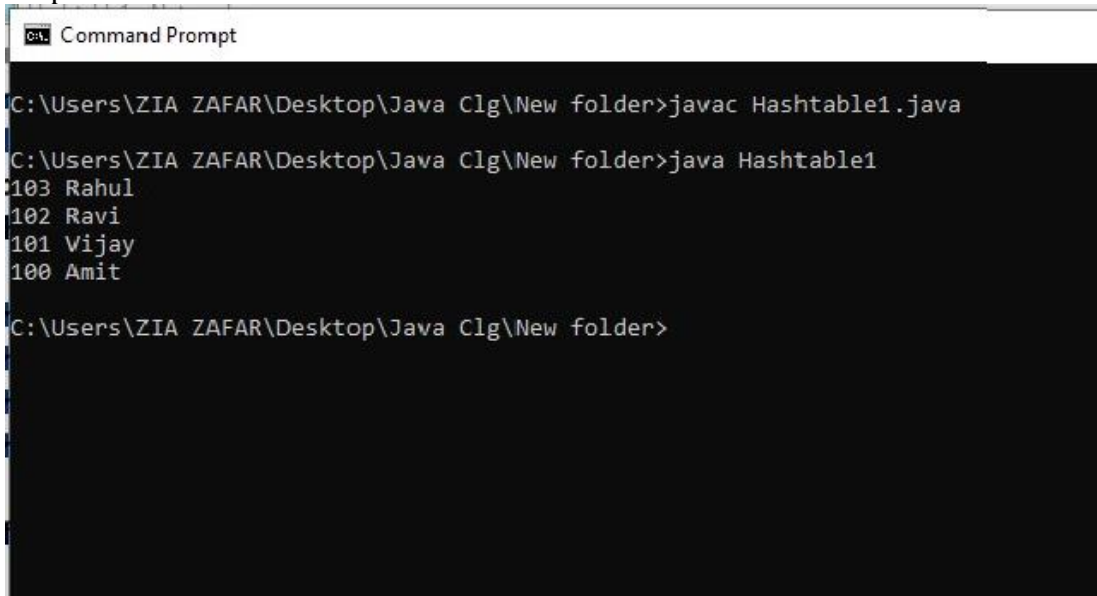

**19. Write a program to accept data and display output in key, value pair?**

```
import java.util.*;
class Hashtable1{
public static void main(String args[]){
    Hashtable<Integer,String> hm=new Hashtable<Integer,String>();

    hm.put(100,"Amit");
    hm.put(102,"Ravi");
    hm.put(101,"Vijay");
    hm.put(103,"Rahul");

    for(Map.Entry m:hm.entrySet()){
        System.out.println(m.getKey()+" "+m.getValue());
    }
}
```

Output:

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Hashtable1.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java Hashtable1
103 Rahul
102 Ravi
101 Vijay
100 Amit
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**20. Write a program to create a registration form with different Controls?**

```

import java.awt.*;
import java.awt.event.*;
class Mytext extends Frame implements ActionListener
{
    TextField name,pass;
    Mytext()
    {
        setLayout(new FlowLayout());
        Label n = new Label("name :",Label.LEFT);
        name = new TextField(20);
        Label p = new Label("password : ",Label.LEFT);
        pass = new TextField(20);

        pass.setEchoChar('*');

        name.setBackground(Color.pink);
        name.setForeground(Color.blue);
        Font f = new Font("Arial",Font.PLAIN,25);
        name.setFont(f);

        this.add(n);
        this.add(name);
        this.add(p);
        this.add(pass);
        name.addActionListener(this);
        pass.addActionListener(this);

        this.addWindowListener(new WindowAdapter()
        {
            public void windowClosing(WindowEvent we)
            { System.exit(0);}
        });
    } //constructor
    public void actionPerformed(ActionEvent ae)
    {
        repaint();}
    public void paint(Graphics g)
    {

{
MenuBar mb = new MenuBar();
setMenuBar(mb);
vehicles = new Menu("Branded vehicles");
colors = new Menu("popolor colors:");

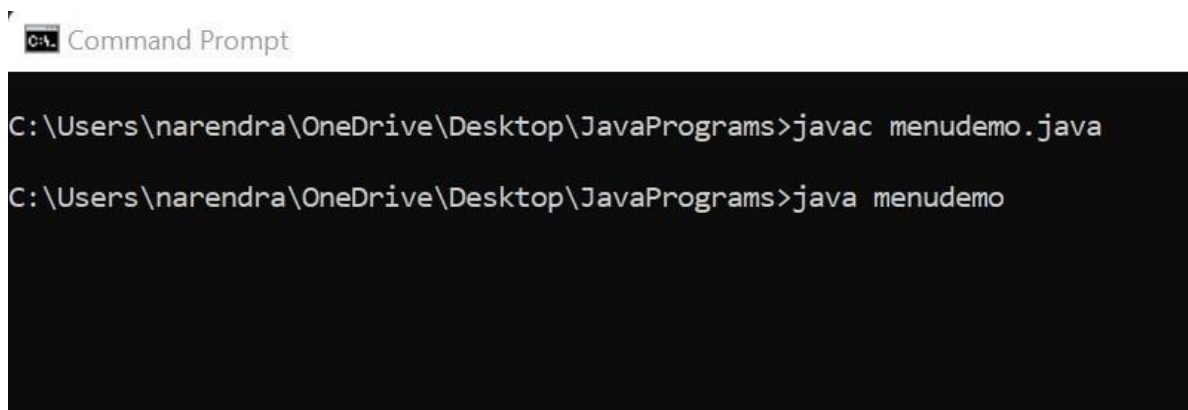

vehicles.add(new MenuItem(" hero honda:"));
vehicles.add(new MenuItem(" suzuki:"));
vehicles.add(new MenuItem(" pulsor:"));
vehicles.add(new MenuItem(" splendor"));
colors.add(new MenuItem("Pink"));
colors.add(new MenuItem("blue"));
colors.add(new MenuItem("green"));
colors.add(new MenuItem("yellow"));
mb.add(vehicles);
mb.add(colors);
vehicles.addActionListener(this);
colors.addActionListener(this);
tf = new TextField(15);
add(tf,"South");
setTitle("Menus in Action");
```

```

setSize(300,350);
setVisible(true);
}
public void actionPerformed(ActionEvent e)
{
String str = e.getActionCommand();
tf.setText("you wantded" + str);
}
public static void main(String a[])
{
new menudemo();
}
}

```

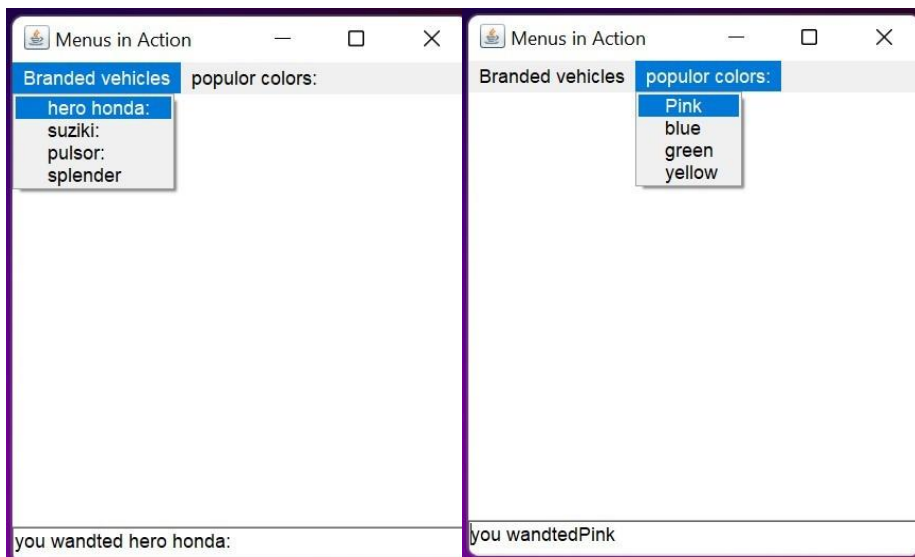

## Output

```

C:\Users\narendra\OneDrive\Desktop\JavaPrograms>javac menudemo.java
C:\Users\narendra\OneDrive\Desktop\JavaPrograms>java menudemo

```

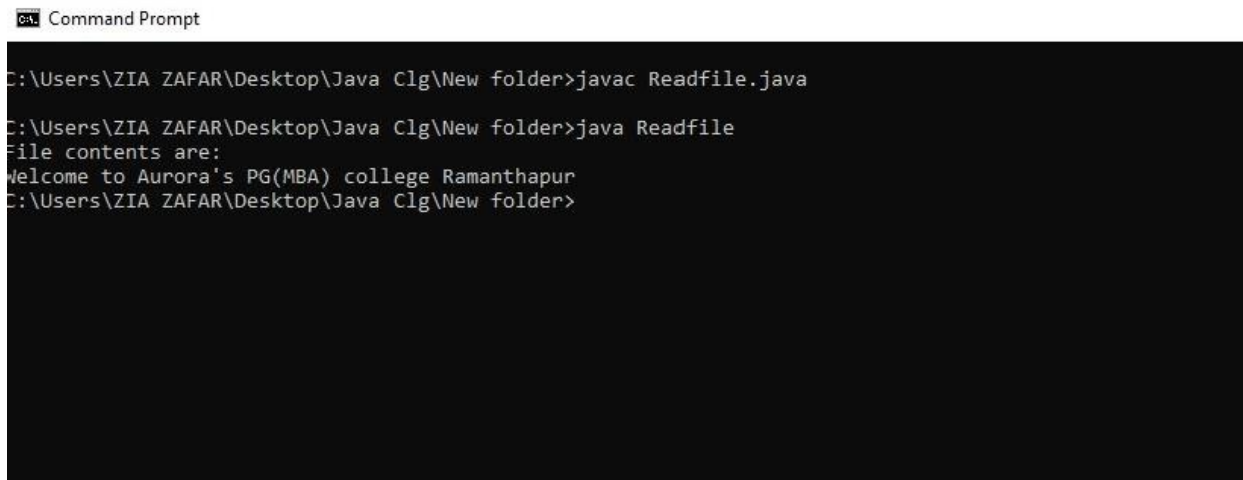

**23. Write a program to copy data from one file to another file?**

```
import java.io.*;
class Copyfile
{
public static void main(String args[]) throws IOException
{
int ch;
FileInputStream fin = new FileInputStream(args[0]);
FileOutputStream fos = new FileOutputStream(args[1]);
while((ch=fin.read())!=-1)

fos.write(ch);

fin.close();
fos.close();
System.out.println("1 file is copied");
}
}
```

**Output:**

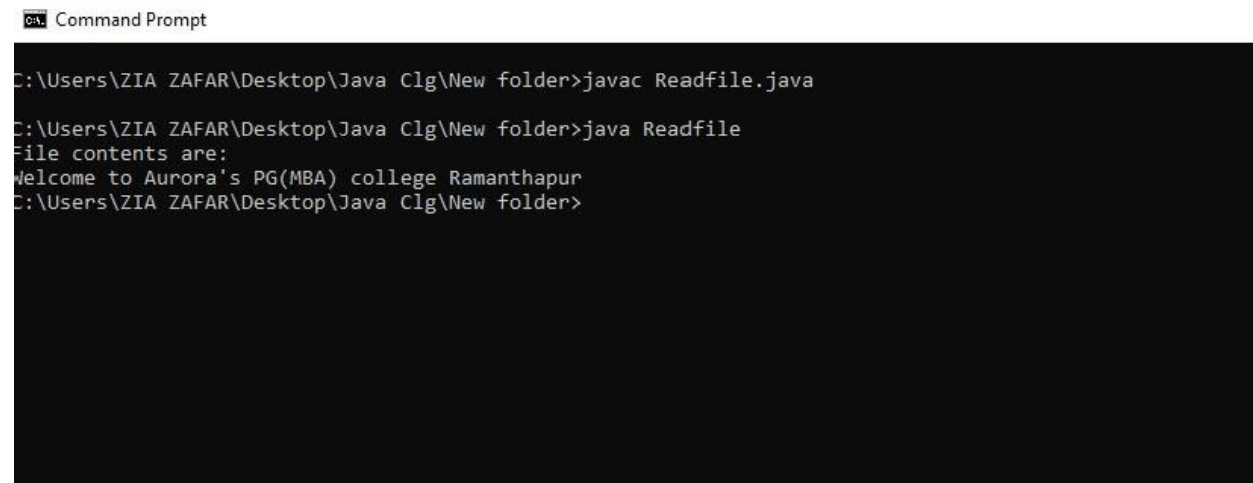

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Readfile.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java Readfile
File contents are:
Welcome to Aurora's PG(MBA) college Ramanthapur
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**24. Write a program to read a file and display output on console?**

**//reading data from a file using FileInputStream**

```
import java.io.*;
class Readfile
{

File contents are:
Welcome to Aurora's PG(MBA) college Ramanthapur
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**25. Write a program to illustrate Serialization?**

```

import java.io.*;
import java.util.Date;
class Employee implements Serializable
{
    private int id; private
    String name; private
    float sal; private Date
    doj;
Employee(int i,String n,float s,Date d)
{
    id=i;
    name=n;
    sal=s;
    doj=d;
}
void display()
{
    System.out.println(id+"\t"+name+"\t"+sal+"\t"+doj);
}
static Employee getdata() throws IOException
{
    BufferedReader br = new BufferedReader(new
InputStreamReader(System.in));
    System.out.print("enter emp id:");
    int id = Integer.parseInt(br.readLine());
    System.out.print("enter name: "); String
name = br.readLine();
    System.out.print("enter Salary : ");
    float sal = Float.parseFloat(br.readLine());
    Date d = new Date();
    Employee e = new Employee(id,name,sal,d);
return e;
}
}

```

**Compiling the Employee class**

 Command Prompt

```

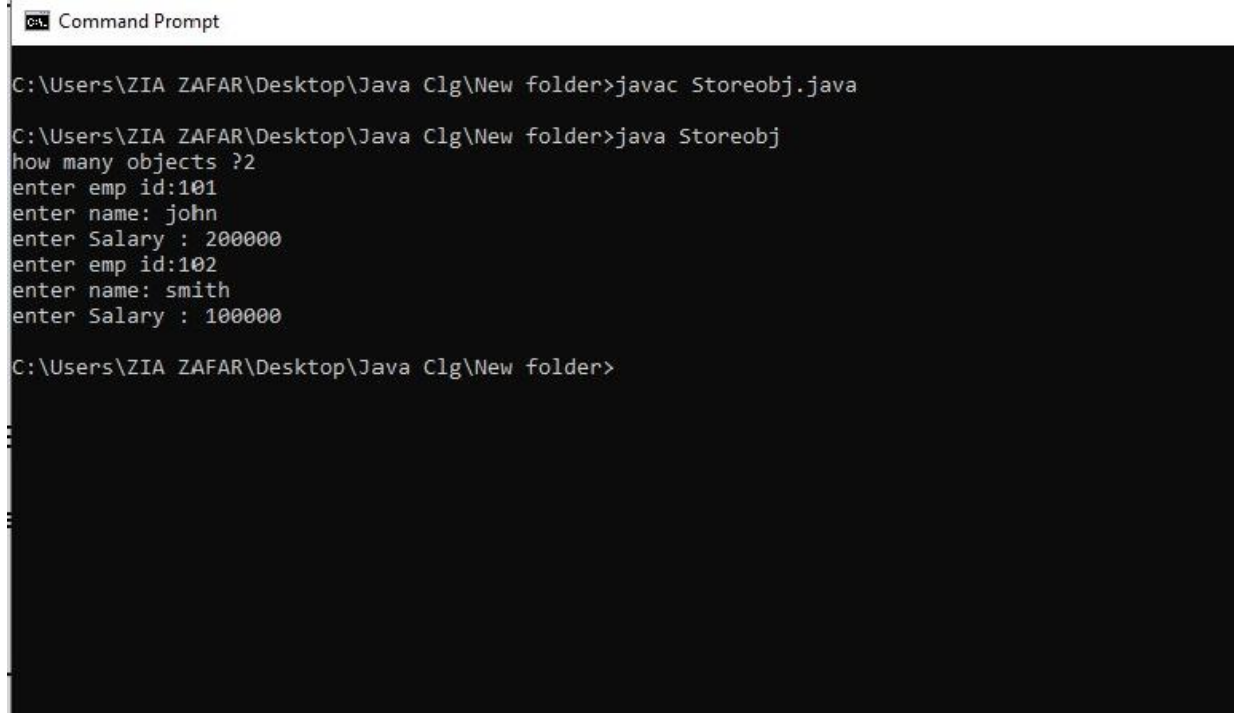

C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Employee.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>_

```

```
import java.io.*;
import java.util.*;
class Storeobj
{
    public static void main(String args[]) throws IOException
    {
        BufferedReader br = new BufferedReader(new
InputStreamReader(System.in));
        FileOutputStream fos = new FileOutputStream ("Objfile");
        ObjectOutputStream oos= new ObjectOutputStream (fos);
        System.out.print("how many objects ?");
        int n=Integer.parseInt(br.readLine());
        for(int i=0;i<n;i++)
        {
            Employee e1 = Employee.getdata();
            oos.writeObject(e1);
        }
        oos.close();
    }
}
```

### Serializing an object into the file objfile

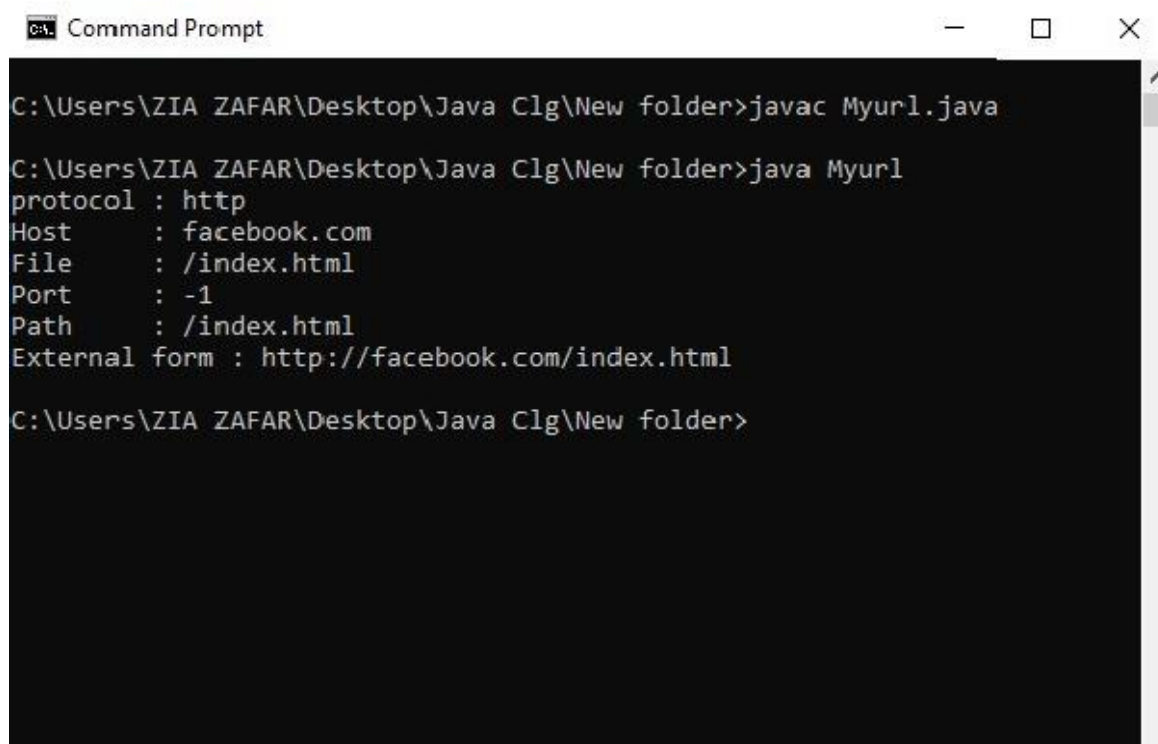

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Storeobj.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java Storeobj
how many objects ?2
enter emp id:101
enter name: john
enter Salary : 200000
enter emp id:102
enter name: smith
enter Salary : 100000
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**26. Write a program to retrieve web page using URL?**

```
import java.io.*;
import java.net.*;

class Myurl
{
    public static void main(String args[]) throws IOException
    {
        URL obj = new URL("http://facebook.com/index.html");
        System.out.println("protocol : "+obj.getProtocol());
        System.out.println("Host   : "+obj.getHost());
        System.out.println("File   : "+obj.getFile());
        System.out.println("Port   : "+obj.getPort());
        System.out.println("Path   : "+obj.getPath());
        System.out.println("External form : "+obj.toExternalForm());
    }
}
```

Output:

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Myurl.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java Myurl
protocol : http
Host      : facebook.com
File      : /index.html
Port      : -1
Path      : /index.html
External form : http://facebook.com/index.html
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**27. Write a program to implement java network programming?(client and server program)**

```
//server
```

```
import java.io.*;
```

```
import java.net.*;
```

```
class Server1
```

```
{
```

```
public static void main(String args[]) throws Exception
```

```
{
```

```
ServerSocket ss = new ServerSocket(777);
```

```
Socket s =ss.accept();
```

```
System.out.println("Connection established");
```

```
OutputStream obj = s.getOutputStream();
```

```
PrintStream ps = new PrintStream(obj);
```

```
String str = "Hello client";
```

```
ps.println(str);
```

```
ps.println("Bye");
```

```
ps.close();
```

```
ss.close();
```

```
}
```

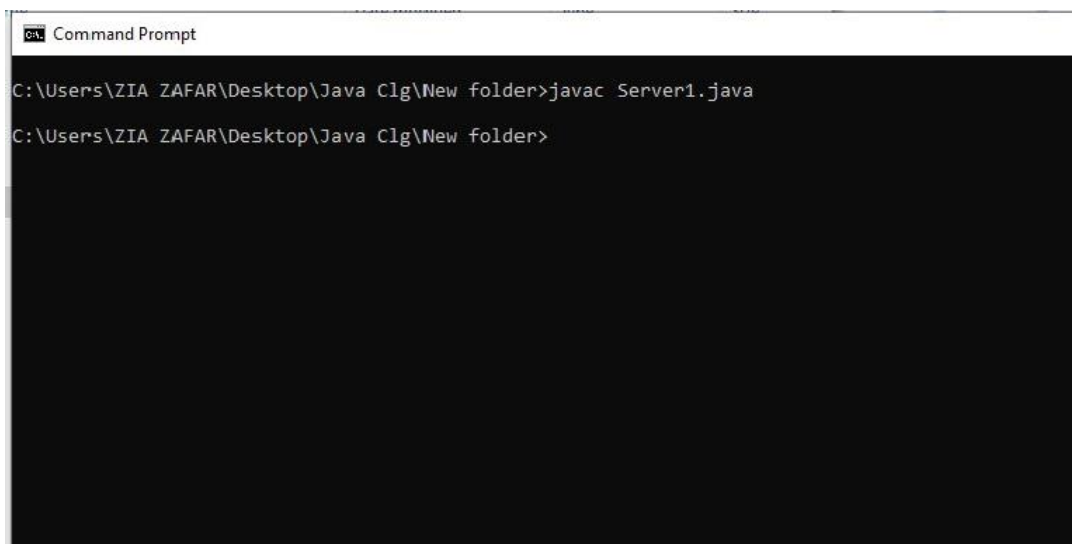

```
}
```

### //creating server for sending some string to the client

```
import java.io.*;
import java.net.*;

class Client1
{
    public static void main(String args[]) throws Exception
    {
        //create client socket with some port
        Socket s = new Socket("localhost",777);
        //to read data from server
        InputStream obj=s.getInputStream();
        //to read from socket
        BufferedReader br = new BufferedReader(new InputStreamReader(obj));
        String str;
        while((str=br.readLine())!=null)
        System.out.println("from Server: "+str);
        br.close();
        s.close();
    }
}
```

### Server Compilation

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Server1.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

## Client Compilation

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Client1.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

## Client File execution: -

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Client1.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java Client1
from Server: Hello client
from Server: Bye
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

## Server File Execution: -

```
Command Prompt
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>javac Server1.java
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>java Server1
Connection established
C:\Users\ZIA ZAFAR\Desktop\Java Clg\New folder>
```

**28. Write a program to implement border Layout?**

```
import java.awt.*;
import javax.swing.*;

public class Border
{
    JFrame f;

    Border()
    {
        f = new JFrame();

        // creating buttons
        JButton b1 = new JButton("NORTH"); // the button will be labeled as NORTH
        JButton b2 = new JButton("SOUTH"); // the button will be labeled as SOUTH
        JButton b3 = new JButton("EAST"); // the button will be labeled as EAST
        JButton b4 = new JButton("WEST"); // the button will be labeled as WEST

        JButton b5 = new JButton("CENTER"); // the button will be labeled as CENTER

        f.add(b1, BorderLayout.NORTH); // b1 will be placed in the North Direction
        f.add(b2, BorderLayout.SOUTH); // b2 will be placed in the South Direction
        f.add(b3, BorderLayout.EAST); // b2 will be placed in the East Direction
        f.add(b4, BorderLayout.WEST); // b2 will be placed in the West Direction
        f.add(b5, BorderLayout.CENTER); // b2 will be placed in the Center

        f.setSize(300, 300);
        f.setVisible(true);
    }

    public static void main(String[] args) {
        new Border();
    }
}
```

}

**Output** 

**29. write a program to implement flow layout?**

```
import java.awt.*;

import javax.swing.*;

public class FlowLayoutExample

{

JFrame frameObj;

// constructor

FlowLayoutExample()

{

// creating a frame object

frameObj = new JFrame();

// creating the buttons

JButton b1 = new JButton("1");

JButton b2 = new JButton("2");

JButton b3 = new JButton("3");

JButton b4 = new JButton("4");

JButton b5 = new JButton("5");

JButton b6 = new JButton("6");

JButton b7 = new JButton("7");

JButton b8 = new JButton("8");

JButton b9 = new JButton("9");
```

```
 JButton b10 = new JButton("10");

 // adding the buttons to frame

 frameObj.add(b1); frameObj.add(b2); frameObj.add(b3); frameObj.add(b4);

 frameObj.add(b5); frameObj.add(b6); frameObj.add(b7); frameObj.add(b8);

 frameObj.add(b9); frameObj.add(b10);

 frameObj.setLayout(new FlowLayout());

 frameObj.setSize(300, 300);

 frameObj.setVisible(true);

 }

 // main method

 public static void main(String args[])

 {

 new FlowLayoutExample();}
```

### Output

**30. write a program to Demonstrate Key Listener?**

```
import java.awt.*;
import java.awt.event.*;

public class MyKeyEvents extends Frame implements KeyListener
{
String str;

public MyKeyEvents()
{
this.addWindowListener(new WindowAdapter()
{
public void windowClosing(WindowEvent we)
{
System.exit(0);
}});

str=new String();

addKeyListener(this);
}

public void keyPressed(KeyEvent k)
{
char ch=k.getKeyChar();

str+=ch;

repaint();
}

public void keyTyped(KeyEvent k)
{
}

public void keyReleased(KeyEvent k)
{
}

public void paint(Graphics g)
```

```
{  
g.drawString(str,140,140);  
}  
  
public static void main(String[] args)  
{  
MyKeyEvents f = new MyKeyEvents();  
f.setSize(550,550);  
f.setVisible(true);  
  
}}
```

### Output

hello welcome to java program in awt
